

GRINDUR®

The novelty from HEIN, LEHMANN

Developed from the well-known CONIDUR® fine-perforated sheet metal, which has proven its worth in mills for many years, GRINDUR® is our latest development from HEIN, LEHMANN.

Initially designed for peeling potatoes, this new sheet metal offers the same roughness as CONIDUR®, but without perforations.

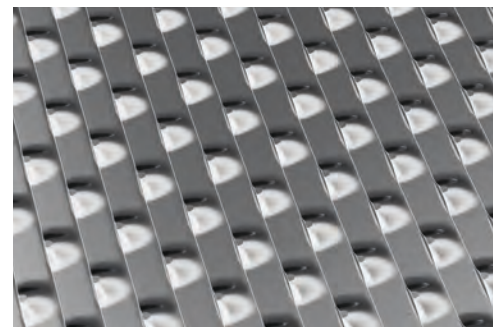

Advantages include excellent friction performance combined with a long service life, without the risk of blockage.

We are ready to develop customized GRINDUR® solutions tailored to your specific requirements.

OUR PROGRAM

CONIDUR® – the perforated plate from HEIN, LEHMANN

GRINDUR® – the embossed plate from HEIN, LEHMANN
